

## ADT API:

For now, there are two (2) separate calls. One for admits and the other for discharges.

### Call for Admits:

192.168.254.19:8001/admit/?username=<username>&password=<password>&time=<time>

### Call for Discharges:

192.168.254.19:8001/discharge/?username=<username>&password=<password>&time=<time>

## Parameters:

### Username(required):

- Was Provided.

### Password(required):

- Was Provided.

### Time(required):

- For the server to recognize when time of the last call the input needs to be in Unix epoch time **WITH MILLISECONDS** (e.g. 1535047733721).
- Use <https://currentmillis.com/> as a reference.

## Notes:

This API is for the purpose of reading all discharges and admits that Centers Health Care has input into their database since the time of the users last call to the server. The API requires a timestamp and for the purpose of saving everybody computing time the timestamp from the last call to the server will show all inputs from after that time. However, if one would like to access all inputs from last week, month, or year, insert the appropriate timestamp from those corresponding dates.
